Introduction

The new “334” senior secondary and higher education academic structure will be implemented in September 2009. The Announcement of university entrance requirements is a critical milestone in the implementation of the New Senior Secondary (NSS) academic structure. In 2005, universities announced their support for all four core subjects of the secondary school curriculum – Chinese Language, English Language, Mathematics and Liberal Studies - to be considered as the mandatory minimum requirements for university entrance. To facilitate schools in planning the NSS curriculum, universities have now set out their entrance requirements at faculty/school/programme level with specification on required NSS subjects. The requirements of individual institutions are listed in the attached tables.

For admission to the relevant undergraduate programmes, applicants must meet the general entrance requirements, and the faculty/school/programme entrance requirements; or hold such other qualifications deemed acceptable by the relevant university as equivalent to the requirements mentioned. These entrance requirements are minimum requirements and do not guarantee entrance to a particular university or programme. Subject to necessary modification, universities would continue their current practice of accepting other languages as an alternative to Chinese Language under the new “334” structure. [Some institutions will consider other languages only if an applicant has not taken Chinese Language.]

It is recognised that specification of entrance requirements for individual faculties/ departments by universities should encourage, as far as possible, a positive effect on student choice and school planning in the senior secondary curriculum. A particular feature is that in line with the aim to provide a more broad-based curriculum, universities have supported Combined Science (with a combination of any two of Physics, Chemistry or Biology) alongside single-disciplined science subjects in their entrance requirements. This will allow more room for students to choose electives from all Key Learning Areas to meet their own interests and broaden their learning and knowledge base in preparation for university study.

Universities will also consider taking into account in their selection a broader range of information on student achievements in different areas and provide students with the opportunity to demonstrate that they possess the range of competencies and personal qualities that they will need to benefit from undergraduate education.

Universities are currently developing their approaches to 4-year undergraduate degrees. This is a dynamic process and the sector will continue to align its work with the senior secondary programme. Institutions will make any necessary adjustments to the requirements over time as planning for 4-year university studies progresses.
